Abstracts

Glass cullet refers to recycled and processed glass fragments, which are usually used as raw materials in the glass manufacturing process. It can come from waste generated during the production process or glass containers recycled by consumers. Using cullet not only reduces the melting temperature, thereby saving energy, but also reduces the demand for new raw materials and promotes the recycling of resources. By reusing recycled glass, cullet helps reduce environmental impact and promotes sustainable development goals. The glass cullet market is currently in a rapid growth stage, driven by the global awareness of sustainable development and environmental protection. With the increase in the utilization rate of recycled glass, many countries and regions have actively promoted glass recycling policies, which has promoted the demand for cullet. At the same time, glass manufacturers are increasingly relying on cullet to reduce production costs and energy consumption, thereby improving production efficiency. Looking ahead, it is expected that with the advancement of technology and the continuous increase in market demand, the application of glass cullet will be further expanded, especially in the fields of packaging, construction and automobiles, thereby driving the continued growth of its market.

The global Glass Cullet market size was estimated at USD 3145.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
