Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Glass Cutting Fluid competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global glass cutting fluid production reached approximately 1.5 million tons, with an average global market price of around US\$1,500 per ton. Glass cutting fluid is a chemical product specifically designed for glass processing, primarily used for lubrication, cooling, rust prevention, and cleaning during cutting, slicing, and grinding. It is particularly suitable for diamond tool processing of various hard and brittle materials, including various types of glass (such as optical glass, flat glass, Plexiglas, camera lenses, eyeglass lenses, sapphire glass, etc.), quartz optical products, high-grade marble, premium granite, and ceramic wafers. The industrial chain of glass cutting fluid is a vertical chain from the supply of basic raw materials to final industrial applications: its upstream is the production and supply of basic chemical raw materials (such as mineral oil, synthetic esters, lubricating additives, rust inhibitors, surfactants, etc.); the midstream is the cutting fluid manufacturers, who compound, synthesize, dilute and package the raw materials to produce various types of special cutting fluid products; the downstream is widely used in specific industrial production links such as consumer electronics glass cover processing, photovoltaic glass cutting, and optical lens cold processing. Its demand is directly affected by the development status of these terminal manufacturing industries.

The global Glass Cutting Fluid market size was estimated at USD 2362.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
