## Abstracts

A glass knife is a tool used to make a shallow scratch on the surface of a piece of glass. A glass knife is used to cut one or both sides of the glass. The notch forms a crack on the glass surface and causes the glass to break along the notch. Generally, the broken glass will be divided into two complete pieces. For example, tempered glass will not be divided into two complete pieces, but will break into many small pieces. The glass knife is only suitable for cutting, such as float glass, which can be divided into two complete pieces. The Glass Cutting Pen market is a crucial segment in the glassworking and construction industries, offering a practical and precise tool for making accurate cuts in glass sheets. These pens, equipped with a hardened metal wheel or cutting tip, are used to score glass surfaces before breaking them along the scored line. This process is fundamental in glass cutting and fabrication for various applications, including window installation, glass artistry, and DIY projects. The Glass Cutting Pen's compact design and ease of use make it an essential tool for professionals and hobbyists, enabling them to create clean and controlled glass cuts. This market underscores the importance of precision and safety in glassworking and construction, providing a range of cutting pens that cater to different glass thicknesses and cutting requirements, contributing to the quality and accuracy of glass installations and projects.

The global Glass Cutting Pen market size was estimated at USD 62.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
