Report Overview

A glass knife is a tool used to make a shallow scratch on the surface of a piece of glass. A glass knife is used to cut one or both sides of the glass. The notch forms a crack on the glass surface and causes the glass to break along the notch. Generally, the broken glass will be divided into two complete pieces. For example, tempered glass will not be divided into two complete pieces, but will break into many small pieces. The glass knife is only suitable for cutting, such as float glass, which can be divided into two complete pieces.
