Abstracts

Glass dental materials refer to a specialized category of restorative and prosthetic substances used in dentistry, primarily composed of silicate glass particles embedded within a polymer matrix or combined with other components to form glass ionomer cements (GICs), resin-modified glass ionomers (RMGIs), or glass-ceramics. These materials are valued for their aesthetic qualities, biocompatibility, adhesive properties to tooth structure, and fluoride release capabilities, which help prevent secondary caries. They are commonly applied in various dental procedures, including fillings, luting agents, liners, bases, and as core build-up materials, with specific formulations tailored to withstand oral environmental challenges such as moisture, mechanical stress, and pH fluctuations.
