Report Overview

The Fiber Prepreg is a kind of reinforced semi finished plastics product with resin as base material. The Commonly used fiber includes carbon fiber, glass fiber and other fiber. Glass Fiber Prepreg is conventional glass fabric that has been specially pre-impregnated with catalysed resin during manufacture.

Fiberglass fabrics are used in a wide range of industrial applications and are the most widely available and least expensive composite fabric. It is relatively lightweight, has moderate tensile and compressive strength, and is easy to handle and machine. High strength, dimensional stability, design flexibility and excellent electrical properties are some of the characteristics that insure optimum performance.

There are several types of glass fibers manufactured but only two are widely used in composites: E-glass and S-glass. The most common is E-Glass or Electrical Glass. E-Glass is made from strands of continuous glass filaments that are plied and twisted into yarns and is used when strength and high electrical resistivity is required. S-Glass or Structural glass is approximately 30% stronger and stiffer than E-Glass and offers better properties at elevated temperature.
