Abstracts

Glass Fiber Reinforced (GFR) plastic tube, also known as fiberglass reinforced plastic (FRP) tube or fiberglass tube, is a type of composite material that combines the strength of glass fibers with the versatility of plastic resins. GFR plastic tubes are manufactured by impregnating glass fibers with a thermosetting resin, most commonly polyester, vinyl ester, or epoxy. The glass fibers add strength and stiffness to the plastic matrix, enhancing its mechanical properties and making it resistant to various forms of degradation, such as corrosion, chemicals, moisture, and UV radiation. These tubes are lightweight, durable, and provide excellent dimensional stability. They offer high strength-to-weight ratio and possess exceptional mechanical characteristics, including high tensile and flexural strength, stiffness, and impact resistance. GFR tubes are also electrically non-conductive and have good thermal insulation properties.

The global Glass Fiber Reinforced (GFR) Plastic Tube market size was estimated at USD 620.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
