## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Glass Fiber Reinforced PEEK competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of glass fiber reinforced PEEK reached 3,076 tons in 2024, with an average selling price of US\$82,360 per ton. Glass fiber reinforced PEEK (GFR-PEEK) is a high-performance thermoplastic composite material with polyetheretherketone (PEEK) resin as the matrix and uniformly dispersed glass fibers (E/S-Glass) as the reinforcing phase. It retains the original high-temperature resistance, chemical corrosion resistance, and flame retardant properties of PEEK, while significantly improving rigidity, dimensional stability, and impact resistance through the use of glass fibers. It is widely used in automotive, electrical insulation, and mechanical load-bearing components. The raw materials for glass fiber reinforced PEEK consist of two parts: the main component is polyetheretherketone (PEEK) matrix resin, accounting for approximately 70%~90% of the total formulation mass; the reinforcing phase uses E- or S-glass fibers, commonly chopped strands or milled fibers, with a content of 10%~40%, plus a small amount of coupling agent and heat stabilizer to improve interfacial adhesion and processing stability. Because glass fiber is now fully domestically produced (supply is ample from companies like China Jushi and Taishan Glass Fiber), its price is only about 1/10 that of carbon fiber, and its purity requirements are lower than those for medical-grade carbon fiber. Therefore, raw material availability is good, and delivery cycles are short. In terms of cost structure, the PEEK matrix still accounts for the vast majority: taking a 30% glass fiber reinforced grade as an example, the cost of PEEK resin accounts for approximately 75%~80% of the total cost of the finished particles (of which fluoroketone alone accounts for more than 50% of the cost of PEEK coarse powder), while glass fiber and additives account for only 15%~20%; the

remaining 5%–8% is for energy and labor costs related to melt blending, twin-screw extrusion, and cooling granulation. Overall, the cost per ton of glass fiber reinforced PEEK is only 8%–12% higher than that of pure PEEK, but it yields a 2–3 times increase in flexural modulus and significantly improved dimensional stability, making it more cost-effective than carbon fiber reinforced specifications.

The global Glass Fiber Reinforced PEEK market size was estimated at USD 253.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
