Abstracts

Glass Fiber Reinforced PET (GFR-PET) is a composite material created by embedding glass fibers into a polyethylene terephthalate (PET) polymer matrix, combining the strength, stiffness, and dimensional stability of glass fibers with the chemical resistance, recyclability, and lightweight characteristics of PET. This material is engineered to offer enhanced mechanical properties?such as higher tensile strength, improved impact resistance, and greater thermal stability?compared to unreinforced PET, making it suitable for demanding structural and semi-structural applications across industries like automotive, electronics, and consumer goods. The glass fibers, typically comprising 10?40% of the composite by weight, act as reinforcement to mitigate PET's inherent limitations, such as creep and low heat deflection temperature, while retaining the polymer?s advantages in processability and sustainability.

The global Glass Fiber Reinforced Pet market size was estimated at USD 12678.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
