Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Glass Fiberboard competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Glass Fiberboard are sheet materials made by impregnating treated fiberglass cloth with a resin solution (usually epoxy resin), followed by heat treatment (pre-baking) to bring the resin into the B-stage. These panels are then cut, layered, and pressed together to form a sheet-like product. Glass Fiberboard possess low weight, high mechanical and dielectric properties, good moisture resistance, heat resistance, chemical stability, and good processability. After being punched/CNC (planar) or thermoforming (3D), and decorated, they can be used to create mobile phone back covers, characterized by their lightness, thinness, and high strength, making them highly favored by mainstream terminal manufacturers. In 2024, global production of Glass Fiberboard reached 4.303 billion pieces, with an average selling price of \$5.46 per piece. Companies had an annual production capacity of 70 million pieces and a gross profit margin of 14.7%-28.4%. Upstream fiberglass material companies include: China Jushi, Owens Corning (OC), NEC Glass (NEG), Taishan Fiberglass, Chongqing International (CPIC), and JM (JM); downstream customers include Amazon, Microsoft, Google, Philips, Skyworth, Dell, Transsion, Huawei, Honor, Xiaomi, ZTE, OPPO, and vivo. Glass Fiberboard offer several advantages as an exterior material for smart terminal products. They are low in density, high in strength, resistant to deformation, and provide excellent drop resistance, eliminating the need for a protective case. Furthermore, fiberglass and its fabrics are commonly used and cost-effective. In the design of smart device casings, fiberglass provides advantages such as lightness, thinness, rigidity, ease of shaping, and a low dielectric constant, enabling thinner and lighter designs compared to composite materials and glass covers.

The global Glass Fiberboard market size was estimated at USD 23494.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Glass Fiberboard market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
