### Report Overview

Glass-Glass Solar Panel is a subdivided type of Solar Panel. The solar panel, also known as photovoltaic (PV) module, is a device that generates electricity from sunlight. Solar panels consist of multiple individual solar cells, which are made of semiconductor materials, such as silicon. When sunlight hits a solar cell, it excites electrons in the semiconductor material, which creates an electrical current. This electrical current can be collected by connecting the solar cells together to form a solar panel. Solar panels are commonly used in residential and commercial photovoltaic (PV) systems to produce electricity for homes, businesses, and other electrical loads. They are often mounted on rooftops, but can also be ground-mounted or used in other applications, such as on remote scientific stations or in space satellites. The amount of electricity a solar panel can produce depends on several factors, including the amount of sunlight it receives, the efficiency of its solar cells, and the size of the panel itself.
