Report Overview

Glass handling tools are generally used while installing and transporting glass in glass manufacturing facilities and construction sites. Flat glass is very fragile, which makes the manual handling of this glass very difficult. Improper handling can lead to severe injuries from glass sheet edges or glass shards. Large panes of glass or toughened glass are also very heavy, which necessitates the use of glass handling tools or equipment. Glass handling tools are, thus, used to make the process of moving and working with glass safer and more efficient.

The increasing adoption of glazing and the energy efficiency in buildings will be one of the primary growth drivers for the global glass handling tools and equipment market till 2021. Glass is an environmental-friendly material. The demand for traditional brick and mortar walls is declining due to the increasing popularity of coated glass. The installation of coated glass in commercial structures enhances the aesthetics of artificial lighting systems and facilitates the reflection of more natural light inside the building. Furthermore, many people in the developing economies are also preferring residential glazing due to the rise in disposable incomes and the rapid economic growth. This will consequently increase the need for glass lifting equipment.
