Report Overview

Glass insulation film is a type of material applied to windows to improve energy efficiency by reducing heat transfer and enhancing insulation. It is typically made of multiple layers of polyester film, metalized coatings, and adhesives. The film works by reflecting heat back into the room during the winter and blocking out heat during the summer, thus helping to maintain a more stable indoor temperature. Glass insulation film is commonly used in residential and commercial buildings to reduce energy costs, increase comfort, and protect furnishings from UV damage. It is a cost-effective and non-intrusive solution compared to traditional window replacements or additional insulation installations.
