## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Glass Lined Column Tee competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Glass Lined Column Tee is a T-shaped glass-lined steel fitting used as a branch piece in glass-lined column and piping systems. It consists of a carbon-steel or stainless-steel tee body whose wetted internal surfaces are coated with a chemically resistant glass enamel, giving the part the same corrosion resistance as glass-lined columns while preserving the mechanical strength of steel. Upstream, Glass Lined Column Tees depend on two critical material streams: steel substrates and porcelain enamel frits. The tee bodies are fabricated from carbon or low-alloy steel (or, for some designs, stainless steel) by forging, casting or welding, and then machined to the required flange standards (DIN, ASME, etc.). The internal surfaces are coated with a high-silica, alkali-containing glass frit by spraying or wet enamelling, followed by multiple firing cycles to fuse the enamel onto the steel. Downstream, Glass Lined Column Tees are installed as branch connections on glass-lined columns and associated piping to connect side draws, reflux lines, off-gas lines, utility connections and instrumentation. They form part of complete glass-lined separation systems, where glass-lined columns handle corrosive distillation, absorption, stripping and extraction duties in the chemical, pharmaceutical, agrochemical and food industries. In 2024, global sales of Glass Lined Column Tee reached approximately 79 K units, with an average global market price of around US\$ 825/unit. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 25% to 40%.

The global Glass Lined Column Tee market size was estimated at USD 65.26 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30%

during the forecast period.
