Abstracts

Glass lined reducing flange is one of the fittings of glass lined pipe, spray silicon containing enamel glass glaze on the surface of metal billet. After baking at a high temperature of about 900 °, the enamel glass glaze is closely combined with the metal substrate, and the thickness of the metal substrate is evenly covered with a thickness of 0.8 ~ 0.2. It is an essential part of pipeline transportation. The Glass Lined Reducing Flange market is a niche sector within the industrial equipment industry, catering to applications where the connection of pipelines with varying diameters is essential while maintaining the integrity of glass-lined equipment. Glass Lined Reducing Flanges are specialized components designed to facilitate such connections, ensuring a smooth transition while protecting the glass lining from mechanical stress, corrosive substances, and temperature fluctuations. These flanges play a pivotal role in industries such as chemicals, pharmaceuticals, and food processing, where the protection of equipment from corrosion and wear is paramount.
