Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Glass Lined Steel Columns competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Glass Lined Steel Columns are vertical process columns whose steel shells are internally coated with a vitreous glass enamel to provide exceptional corrosion resistance while maintaining the mechanical strength and pressure integrity of a pressure vessel. In modern chemical plants, these columns are used for counter-current mass transfer processes such as distillation, rectification, stripping, absorption and scrubbing, where vapour and liquid phases contact each other inside the column to achieve separation or purification. Upstream, Glass Lined Steel Columns rely on a specialized supply chain for both the metallic shell and the glass enamel. The shell is typically fabricated from carbon steel or low-alloy steel plates rolled and welded into cylindrical sections, which are then internally lined with a high-silica, alkali-containing porcelain enamel frit using cold-spray or wet-application techniques followed by multiple firing cycles in enamelling furnaces to fuse the glass to the steel. Column internals ? random or structured packing, glass or PTFE-lined trays, liquid distributors, demisters and support grids ? are sourced from specialist vendors in borosilicate glass, ceramics or fluoropolymers. Downstream, Glass Lined Steel Columns are integrated into reaction?separation systems in industries handling corrosive or high-purity media. They are combined with glass-lined reactors, condensers and reboilers to form complete distillation or absorption packages for mineral acid recovery, halogen and halide processing, waste-gas scrubbing, solvent recovery and fine-chemical rectification. Typical end-use sectors include fine and specialty chemicals, agrochemicals, pharmaceuticals and intermediates, flavours and fragrances, food additives and biofuels, where glass-lined steel columns provide a chemically inert, smooth and easy-

to-clean contact surface that minimizes contamination and caking while offering long service life in strongly acidic or halogenated environments. In 2024, global sales of Glass Lined Condenser Columns reached approximately 8,571 units, with an average global market price of around US\$ 89 K/unit. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 30% to 50%.

The global Glass Lined Steel Columns market size was estimated at USD 763.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
