Report Overview

Glass-lined Steel Reactor is a kind of pressure vessel that combines the inside glass coating with the outside steel structure into one body. Glass coating is fused onto the surface of the steel plate at high temperature, which has the advantages anti-corrosion for glass and strength for the steel plate.

Three types of glass-lined steel reactor design AE, BE, CE which can be provided with jacket or half-coil and a wide selection of agitation solutions.

BE

closed-welded reactors without a large main opening for higher pressure ratings.

AE

clamped or flanged-top reactors designed with a removable top head for today's cleanability demands.

CE

rugged, heavyweight reactors with a large top head main cover that allows for installation and removal of one-piece agitators.
