Glass molding press (GMP) , also known as glass molding or precision glass forming, is a sophisticated manufacturing process used for mass production of complex and high-precision glass components. This technique is particularly well-suited for creating optical lenses, prisms, and other intricate glass elements used in industries like optics, imaging, and telecommunications. Glass press molding typically involves the use of a preheated glass blank placed between two molds, one of which has the desired shape of the component to be produced. In PGM process, a glass blank heated to the thickly flowing state is molded to the desired shape using this molding tool.
