Report Overview

Glass partitions or (glass partition walls) are superior quality, non load-bearing (meaning they are not made to support anything but their own weight) panes of glass that make lovely room dividers. Glass partition walls can really open up a room and create spacious, comfortable office areas. Partition wall treatments are generally ceiling to wall dividers. Glass mounting hardware such as aluminum frames help keep these treatments stabilized. As an architectural material, glass partitioning enables building planners to divide a room while keeping the same amount of space and lighting. Glass wall treatments are especially popular with interior designers, as they appreciate the resizing-adaptability and semi opaque quality. Natural lighting can make all the difference in a room's ambience. It has a profound and positive effect on human interaction, as well as the manner in which shapes, colors, patterns and textures are perceived.
