Global Glass Recycling Market 2019 by Manufacturers, Countries, Type and Application, Forecast to 2024

Glass Recycling is the processing of waste glass into usable products. Glass waste should be separated by chemical composition, and then, depending on the end use and local processing capabilities, might also have to be separated into different colors. When glass is used for new container manufacturing, it is virtually infinitely recyclable. The processing and use of recycled glass in manufacturing conserves raw materials, and reduces energy consumption. That which is not recycled, but crushed, reduces the volume of waste sent to landfills.

The Global Glass Recycling Market Size was estimated at USD 3112.35 million in 2023 and is projected to reach USD 4390.00 million by 2029, exhibiting a CAGR of 5.90% during the forecast period.
