Abstracts

A glass sealed thermistor is a type of temperature-sensitive resistor encased in a hermetically sealed glass envelope, designed to provide precise and stable resistance changes in response to temperature variations while offering protection from moisture, chemicals, and mechanical stress. This encapsulation enhances its durability and reliability in harsh environments, making it suitable for applications where accuracy and long-term performance are critical, such as in medical devices, automotive systems, industrial controls, and high-precision instrumentation. The hermetic seal prevents oxidation and contamination of the thermistor material, ensuring consistent thermal response and extended operational life compared to unsealed alternatives.

The global Glass Sealed Thermistor market size was estimated at USD 182.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
