Report Overview

Fibers, such as polymers and carbon fiber, have mechanical qualities that are generally equivalent to glass fiber. Although not as stiff as carbon fiber, when used in composites, it is far less expensive and brittle. As a result, glass fibers are utilized as a reinforcing agent in various polymer goods to create glass-reinforced plastic, commonly known as fiberglass which is an extremely hard and lighter in weight material. Extruding small fragments of silica-based glass into numerous fibers with tiny diameters suited for textile processing produces glass fiber. Since the revelation that asbestos causes cancer followed by its removal from most items, glass fiber has grown in favor. The safety of glass fiber, on the other hand, is being questioned, since research reveals that the influence of this substance might induce toxicity akin to asbestos.
