Report Overview

Glass top display freezer is a refrigeration equipment, which has a door at the top that is made of glass to ensure visibility of the products stored inside. Glass top display freezers are mainly used to generate revenue through the point-of-sale technique. Unlike freezers that have a glass door and more length, and are also called vertical freezers, glass top display freezers are horizontal in nature due to their extra width. They are sometimes also referred to as horizontal freezers. These freezers are mostly used for storing perishable items such as frozen food and take-home ice cream. The increasing availability of frozen food through organized retail will be one of the major factors that will have a positive impact on the market's growth. Organized retail includes supermarkets, hypermarkets, convenience stores, and independent stores. These stores use glass top display freezers for merchandising frozen foods products including frozen vegetables, frozen fruits, and frozen meat products. The coming years will witness an increase in the demand for frozen food and the rise in number of such retail outlets. This will in turn increase the demand for glass top display freezers, fueling market growth.
