Report Overview

Glasses-free 3D is any method of displaying stereoscopic images (adding binocular perception of 3D depth) without the use of special headgear or glasses on the part of the viewer. Because headgear is not required, it is also called 'glassesless 3D' or 'autostereoscopy'. There are two broad approaches currently used to accommodate motion parallax and wider viewing angles: eye-tracking, and multiple views so that the display does not need to sense where the viewers' eyes are located.

The global Glasses-Free 3D Displays market size was estimated at USD 16 million in 2023 and is projected to reach USD 93.01 million by 2032, exhibiting a CAGR of 21.60% during the forecast period.
