Abstracts

Glasses are a combination of lenses and frames, used to improve vision, protect eyes or for decorative purposes. Glasses can correct a variety of vision problems, including nearsightedness, farsightedness, astigmatism, presbyopia, strabismus, or amblyopia. According to the "World Vision Report" released by the World Health Organization in 2020, among the over 7 billion people in the world, about 2.6 billion people suffer from myopia, and 1.8 billion people suffer from presbyopia. Myopia and presbyopia have become the focus of human eye health. The problem is that the rigid demand for vision correction is gradually increasing, which further expands the glasses industry market, and the industry has a broad space for development. Affected by changes in lifestyle, people rely more on smart terminals such as smartphones and tablets. Online classrooms, online offices, and online entertainment are becoming more and more normalized. The problem of visual health has become more prominent, which has given birth to a potential market for functional lens products such as delaying the development of myopia, preventing blue light, and alleviating office visual fatigue, making the industry have a good development prospect. The population with vision problems continues to increase, and the market has broad room for development. The development trend of high incidence of myopia and younger age among teenagers has created a huge demand for myopia prevention and control lenses. The degree of aging is further deepening, and the visual defects of middle-aged and elderly people continue to aggravate, driving the market demand for progressive multifocal lenses. In addition, the national income structure has been continuously improved, the consumption level and level have been continuously improved, and the quality of life has been steadily improved, laying a good foundation for the development of the optical retail industry. At the same time, for some young people, glasses have gradually become a carrier for people to highlight their individuality. Parents have higher requirements for the stability, safety, comfort and multi-scenario use of glasses worn by their children. Multiple

consumer demands will drive the sales of out-of-focus lenses for children and adolescents, and will also further increase the market penetration rate of functional lenses.

The global Glasses market size was estimated at USD 143730.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
