Abstracts

The glasslined heat exchanger is a specialized industrial heat transfer device characterized by a steel shell and a glass-enameled interior surface, designed to handle highly corrosive fluids and maintain product purity in demanding applications. Its construction involves fusing a layer of borosilicate glass to the metal substrate through a high-temperature firing process, creating a non-reactive, smooth, and impermeable barrier that resists chemical attack, prevents contamination, and minimizes fouling. This equipment is essential in industries such as pharmaceuticals, fine chemicals, and food processing, where even trace metal contamination or corrosion by aggressive media (acids, alkalis, or solvents) must be avoided to ensure safety, product integrity, and regulatory compliance.

The global Glasslined Heat Exchanger market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
