Abstracts

Glaze and icing stabilizers are food additives designed to maintain the structural integrity, texture, and visual appeal of glazes, frostings, and icings by preventing issues such as syneresis (weeping), crystallization, melting, or separation during storage, transportation, or varying temperature conditions. These stabilizers typically function by modifying water activity, controlling viscosity, and enhancing emulsion stability through the use of hydrocolloids (e.g., xanthan gum, pectin, cellulose gum), emulsifiers, and humectants, ensuring that the finished product remains smooth, glossy, and spreadable while extending shelf life and improving performance under diverse climatic and handling circumstances.

The global Glaze And Icing Stabilizers market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
