Report Overview

Split glow cell assay are bioluminescent assays that measures cell viability in real time. The Split glow luciferase reagent is optimized to sensitively detect cell-based click beetle split luciferase activity over a prolonged period of time. Cell splitting is a method of increasing a cellular system's capacity by subdividing or splitting cells into two or more smaller cells. Cell-based assay is a test that uses living cells. The fundamental approaches comprise a number of tests that can be used to assess cell toxicity, proliferation, motility, generation of a specific cellular product and cellular shape. Cell-based assays offer a more accurate approximation during the use of live cells during experiments.
