### Report Overview

A glowplug (alternatively spelled as glow plug or glow-plug) is a heating device used to aid starting diesel engines. In cold weather, high speed diesel engines can be difficult to start because the mass of the cylinder block and cylinder head absorb the heat of compression, preventing ignition (which relies on that heat).

The Glow Plug market growth is influenced by a number of factors, such as increasing automotive production, stringent emission norms, and rising demand for higher fuel efficiency. Manufacturers making long-term contracts with suppliers to reduce production costs is another factor, which will fuel the growth of the market.
