Abstracts

GLP-1, or glucagon-like peptide-1, is a naturally occurring hormone in the body that plays a role in glucose homeostasis and appetite regulation. In the context of weight loss, GLP-1 has gained attention due to its potential to influence body weight. GLP-1-based medications, such as GLP-1 receptor agonists, are a class of drugs used primarily for the treatment of type 2 diabetes. However, they have also been found to have beneficial effects on body weight. These drugs mimic the action of GLP-1 in the body, leading to increased insulin secretion, decreased glucagon release, slowed gastric emptying, and a sense of fullness. These effects collectively contribute to improved blood sugar control and a reduction in appetite and food intake.

Expanding Indications: GLP-1 receptor agonists were primarily developed for the treatment of type 2 diabetes. However, there was growing interest in their potential application for weight management in individuals without diabetes. Some GLP-1 medications received regulatory approval for weight loss.

New Drug Development: Pharmaceutical companies were investing in the research and development of new GLP-1 receptor agonists with enhanced properties, including improved efficacy, longer duration of action, and better tolerability. These developments aimed to address various patient needs and preferences.

Combination Therapies: Researchers were exploring the use of GLP-1 medications in combination with other weight loss therapies, such as anti-obesity medications or lifestyle interventions. Combining different approaches could provide synergistic effects in promoting weight loss.

Increased Patient Awareness: As more research findings became available and regulatory approvals were granted for weight management, there was an increased awareness among healthcare professionals and patients regarding the potential benefits of GLP-1 receptor agonists for weight loss.

Market Competition: With the emergence of new medications and indications, the market for GLP-1-based therapies for weight loss was becoming more competitive. This competition could drive innovation and potentially lead to more accessible and diverse

treatment options.

The global GLP-1 for Weight Loss market size was estimated at USD 4067.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.50% during the forecast period.
