Abstracts

Glucose Meter is a medical device for determining the approximate concentration of glucose in the blood. It can also be a strip of glucose paper dipped into a substance and measured to the glucose chart. It is a key element of home blood glucose monitoring (HBGM) by people with diabetes mellitus or hypoglycemia. A small drop of blood, obtained by pricking the skin with a lancet, is placed on a disposable test strip that the meter reads and uses to calculate the blood glucose level. The meter then displays the level in mg/dl or mmol/l. The glucose meter market is driven by the rising prevalence of diabetes worldwide, which has created a growing demand for convenient and accurate home-based monitoring of blood glucose levels. As the number of people diagnosed with diabetes increases, there is an increasing need for personal health management tools that can provide real-time data and help individuals manage their condition effectively. Additionally, advancements in glucose meter technology, such as improved accuracy, ease of use, and connectivity with smartphones and health apps, have further boosted the adoption of these devices. The growing awareness of the importance of diabetes management and preventive healthcare is also contributing to the market's expansion. However, the glucose meter market faces challenges such as the high cost of continuous glucose monitoring systems and the need for regular calibration of traditional glucose meters. While the devices are essential for diabetes management, the ongoing costs of test strips and lancets can be a barrier, particularly for people without adequate healthcare coverage. Moreover, the market is highly competitive, with several new technologies emerging, such as non-invasive glucose monitoring devices, which could potentially disrupt the traditional glucose meter market. These factors may slow down the growth of the market and create barriers for some consumers.

The global Glucose Meter market size was estimated at USD 1452.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the

forecast period.
