Abstracts

A glycol make-up system is a specialized industrial fluid management setup designed to continuously monitor and replenish glycol-based heat transfer fluids, primarily ethylene or propylene glycol, within closed-loop heating, cooling, or refrigeration systems. These systems are essential for maintaining precise glycol concentration levels?preventing fluid degradation, corrosion, freezing, or microbial growth?while compensating for fluid loss due to evaporation, leaks, or maintenance. They typically integrate automated components such as storage tanks, pumps, sensors, controllers, and injection mechanisms to ensure operational efficiency, thermal performance, and equipment longevity in applications ranging from HVAC and process cooling to geothermal and solar thermal systems. By automating fluid management, these systems reduce manual intervention, minimize downtime, and enhance system reliability in demanding industrial and commercial environments.

The global Glycol Make Up System market size was estimated at USD 180.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
