## Abstracts

Glyphosate Isopropylamine Salt Solution is a highly effective broad-spectrum non-selective herbicide, which is a salt formed by the reaction of glyphosate with isopropylamine and formulated as an aqueous solution. This herbicide is rapidly absorbed and transported throughout the plant, inhibiting the activity of enolpyruvylshikimate-3-phosphate synthase within the plant, obstructing protein synthesis, and ultimately causing the death of weeds. It is suitable for weed control in orchards, rubber plantations, tea gardens, and other crop fields, and is relatively environmentally friendly.

The global Glyphosate Isopropylamine Salt Solution market size was estimated at USD 843.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
