## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on GMP Grade Cell Cryopreservation Solution competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. GMP-grade cell cryopreservation solution is a cell preservation fluid that complies with Good Manufacturing Practice (GMP) standards and is designed for the safe storage and recovery of cell drugs. It does not contain serum, protein or dimethylsulfoxide (DMSO), ensuring no unnecessary contamination or side effects. This cryopreservation fluid is used to preserve cells after the production of cell drugs is completed, and supports cell recovery in situ (RIP, Recovery In Position), so that the recovered cells do not need to be washed and can be directly injected or reinfused. All components are strictly confirmed before use to ensure the safety and effectiveness of cell drugs.

The global GMP Grade Cell Cryopreservation Solution market size was estimated at USD 102.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
