Abstracts

GMP LVV Production Service refers to the production of Lentiviral Vectors (LVVs) in accordance with Good Manufacturing Practice (GMP) requirements for customers. Lentiviral Vectors are commonly used gene transfer tools that can efficiently introduce exogenous genes into various cell types and achieve stable gene expression. In GMP LVV Production Service, strict quality control standards are followed, including quality control of raw materials, monitoring of production processes, testing and release of products, to ensure that the produced lentiviral vectors meet safety and effectiveness requirements. This service provides important support for research and application in the fields of gene therapy and cellular therapy. The global GMP lentiviral vector manufacturing service will primarily be driven by the rapid expansion of cell and gene therapy. The continued growth in pipelines for CAR-T, gene repair, and tumor immunotherapy, along with the global spread of clinical trials from developed countries, has resulted in a persistent shortage of high-quality, traceable GMP-grade lentiviral vectors. Innovative pharmaceutical companies and biotech startups are increasingly outsourcing manufacturing to specialized CDMOs to shorten time-to-market and reduce fixed asset investment. Secondly, manufacturing technologies will upgrade towards large-scale and intelligent production. Continuous production, single-use reactors, high-density cell culture, and platform-based process development will mature, coupled with PAT online monitoring, MES, and electronic batch recording systems to improve process stability and batch-to-batch consistency. Regarding quality standards, regulatory agencies in various countries are imposing stricter requirements on residual DNA, replicating viruses, and impurity profiles, prompting service providers to continuously enhance their capabilities in release testing, quality control methodologies, and regulatory compliance. Finally, the global market landscape will exhibit a trend of both regional clustering and collaboration. North America and Europe still dominate in terms of technology and regulatory experience, but the Asia-Pacific region, especially

China and South Korea, is leveraging its cost and supply chain advantages to form internationally competitive GMP vector production bases. Mergers and acquisitions, joint development, and long-term capacity lock-in agreements will become more common, and leading CDMOs are evolving into comprehensive solution providers "from vector to finished cell therapy" through patent platforms, capacity networks, and one-stop CMC services.

The global GMP LVV Production Service market size was estimated at USD 574.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
