Abstracts

Goat milk derivatives are the products manufactured by goat milk. Goat milk is derived from goat and is widely consumed by the people living in APAC regions. The adoption of the vegan diet and increase in lactose-intolerant people are the growth deterrents affecting the market whereas the properties of goat milk such as rich in fatty acids and calcium, a nutritional value equivalent to human milk, easy to digest by infants and increase in government aids towards dairy industries are some of the factors affecting the growth of the market. The food market includes both fresh and processed foods. According to our research, the global food and beverage market has a sales revenue of approximately US\$10 trillion. China is the world's number one food and beverage market and the world's number one food and beverage producer. In the market drivers section, the total consumer spending forecast shows that consumption at home is growing faster than consumption away from home. However, food service continues to become increasingly important due to changing lifestyles. In addition, the rise of private label brands is putting pressure on the margins of brand manufacturers as retailers compete for a higher share of product sales.
