## Abstracts

A garment-on-hang storage system is a specialist warehouse storage solution designed for the efficient storage and handling of garments in the apparel industry. A garment-on-hang storage system eliminates the need for workers to walk around to find garments, significantly reducing travel time and manual labour. This is because garments are stored on mobile transport carts or automated tracks. Delivering garments to team members allows for quick retrieval and significantly increases order fulfillment speed. There are two main configurations for a garment-on-hang storage system. The static storage configuration is the most basic GOH system. Its overhead tracks and hangers provide a simple way to store garments ? think of it as a larger-scale hanging closet. Workers manually store and retrieve garments as needed. This is ideal for situations where space optimisation is a priority but high volumes do not need to be moved. A dynamic storage garment-on-hang system prioritises high throughput. It includes the basic static storage components and adds motorised carts that move along tracks. These carts enable efficient movement of garments between different warehouse areas, such as picking stations or staging areas. This type is ideal for busy warehouses that handle a constant flow of garments in and out.

The global GOH Storage System market size was estimated at USD 1690.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
