Abstracts

Gold dressing agents are chemical reagents used in the process of gold ore extraction, which mainly separate metallic gold from ore through chemical reactions. Flotation agents help separate gold minerals and impurities, cyaniding agents dissolve gold from ore through cyanidation reactions, and other reagents are used to improve beneficiation efficiency and optimize pulp performance. With the improvement of environmental protection requirements, the production of gold dressing agents is gradually developing in the direction of low toxicity, harmlessness, and greenness, helping mining companies to improve the recovery rate of gold mines and meet the industry's demand for efficient, safe, and environmentally friendly beneficiation agents.
