Abstracts

Goods-to-Person Pick Station is a workstation within an automated warehouse where items are delivered directly to a picker by robotic or conveyor systems, eliminating the need for workers to travel through storage areas. This setup increases picking efficiency and accuracy by allowing the worker to remain stationary while the system brings the required items to them in a controlled and ergonomic manner. It is commonly used in modern fulfillment centers to streamline order processing and reduce labor-intensive tasks. The Goods-to-Person Pick Station market is gaining momentum as industries increasingly adopt automated fulfillment technologies to enhance warehouse efficiency and accuracy. These systems streamline order processing by bringing products directly to operators, minimizing travel time, and significantly improving picking productivity. Advances in robotics, artificial intelligence, and warehouse management software are enabling higher levels of system integration and flexibility, allowing operations to adapt quickly to fluctuating order volumes. The market is also benefiting from the rapid expansion of e-commerce, where fast and precise order fulfillment has become a competitive necessity. As labor costs rise and warehouse space becomes more constrained, companies are investing in Goods-to-Person Pick Stations to optimize resource utilization and achieve higher operational throughput, making them a critical component of intelligent logistics and smart warehouse infrastructure.

The global Goods-to-Person Pick Station market size was estimated at USD 2205.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
