Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on GOS Ceramic Array competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The GOS ceramic array is an array structure composed of multiple GOS ceramic plates, which are usually used in high-performance radiation detection and imaging systems. Each ceramic plate is made of gadolinium oxysulfide (Gd₂O₃S) material, which has high light output and density and can effectively convert radiation energy into optical signals.
