Report Overview

A GPS data logger is a compact electronic device designed to record and store location-based data over time, typically using Global Positioning System (GPS) technology to capture coordinates, timestamps, speed, altitude, and other geospatial metrics. These devices are widely used across industries such as logistics, fleet management, outdoor recreation, wildlife tracking, and research, where precise location tracking and historical route analysis are essential. Unlike real-time GPS trackers, data loggers store information internally for later retrieval, making them ideal for applications where continuous connectivity is unnecessary or impractical. The market for GPS data loggers is driven by increasing demand for efficient asset tracking, advancements in GPS accuracy, and the growing adoption of IoT-based solutions in transportation and fieldwork. Key features influencing market preferences include battery life, storage capacity, ruggedness for outdoor use, and compatibility with mapping and analytics software. Competitive differentiation often revolves around enhanced precision, extended battery performance, and integration with cloud-based data management platforms.

The global Gps Data Logger market size was estimated at USD 113.57 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.25% during the forecast period.
