Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on GPS-guided Automatic Lawn Mower competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. GPS-Guided Automatic Lawn Mower is a smart robotic lawn mower that uses the Global Positioning System (GPS) for autonomous navigation. It receives GPS signals (or combines enhanced positioning technologies such as RTK and GLONASS) to determine its real-time location and plans the optimal mowing path based on a pre-set lawn map, achieving efficient and precise fully automatic lawn mowing. The price range is between \$800 and \$5,000. In 2024, the production of GPS-navigation-enabled lawn mowers is expected to reach approximately 1.44 million units, with an average global market price of approximately USD 2,500 per unit. The trend toward intelligent technology is driving comprehensive changes in lawn maintenance and garden landscaping management models. With rapid technological advancements and innovations, the lawn mower market is undergoing a transformative period filled with both opportunities and challenges. The United States is the world's largest consumer market for garden machinery products. As the number of households continues to grow, further stimulating market demand, it is projected that the demand for garden machinery products in the United States will grow at a rate of 3.00%. In Europe, developed countries have favorable natural environments, early urbanization processes, high levels of urbanization, larger per capita land areas, and high penetration rates of gardens and villas. Residents tend to manage their own gardens, resulting in strong demand for GPS-navigation-enabled lawn mowers, with market demand ranking second globally. Asia has a high population density, limited per capita land area, and most countries are still developing nations with relatively low household income levels. Therefore, the market demand for GPS-navigation lawn mowers in Asia is relatively

small. However, due to rapid economic development, Asia is expected to emerge as a new consumer market for garden machinery products. Overall, driven by environmental policies, technological innovations, and consumers' high focus on intelligent products and cost savings, the GPS-navigation lawn mower market is expected to maintain steady growth over the next decade.

The global GPS-guided Automatic Lawn Mower market size was estimated at USD 3611.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
