Report Overview

A GPS (or GNSS) simulator outputs exactly the same type of radio signal as emitted by the satellites themselves. The signals include all the information such as date and time that a GPS device would be able to convert if it was actually out in the real world.

When a receiver is connected to a simulator it behaves exactly as if it were really outside, moving around as per the scenario that is being played into it. A newly developed device can be benchmarked if it is repeatedly subjected to an identical strength and quality of signal rather than the dynamic and constantly changing live broadcast from GPS satellites.

This report provides a deep insight into the global GPS Simulator market covering all its essential aspects. This ranges from a macro overview of the market to micro details of the market size, competitive landscape, development trend, niche market, key market drivers and challenges, SWOT analysis, value chain analysis, etc.
