Abstracts

Grab type ship unloaders are heavy-duty bulk material handling machines used primarily in ports and terminals to unload dry bulk cargo?such as coal, iron ore, grain, fertilizers, and aggregates?from the holds of ships. These machines typically operate on rails along the quay and are equipped with a grab bucket suspended from a trolley or crane structure, which is lowered into the ship?s cargo hold, closes to collect material, lifts it out, and deposits it onto a conveyor system or into receiving hoppers for further transport. They are valued for their flexibility in handling various types and consistencies of bulk materials, as well as their ability to operate in confined spaces and reach deep into vessel holds, making them a common choice in ports where multiple cargo types are handled or where infrastructure constraints limit the use of continuous unloaders.

The global Grab Type Ship Unloaders market size was estimated at USD 350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
