## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Grafting-from Copolymers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Grafting-from copolymers are a class of copolymers formed by initiating the polymerization of side chains directly from functional sites (initiators) along a pre-existing polymer backbone. This technique, also known as the "grafting-from" method, relies on in-situ chain growth polymerization at reactive sites on the main chain, enabling the formation of densely grafted architectures such as polymer brushes. The method is widely used to tailor surface properties, enhance compatibility between dissimilar materials, or develop functional coatings and nanostructures. Compared to "grafting-onto" and "grafting-through" techniques, grafting-from typically allows for higher grafting densities and more uniform side-chain growth. The key market drivers for grafting-from copolymers include the growing demand for advanced materials with customizable surface properties in sectors such as biomedical engineering, electronics, packaging, and coatings. Their ability to create high-density, functionalized polymer brushes makes them ideal for applications requiring biocompatibility, antifouling surfaces, drug delivery, and adhesion control. Additionally, the rise of nanotechnology and precision materials in fields like tissue engineering and responsive membranes further fuels the need for grafting-from copolymers, as they offer precise molecular design and tunable functionalities. Environmental regulations and sustainability initiatives also promote their use in developing recyclable and high-performance polymer blends.

The global Grafting-from Copolymers market size was estimated at USD 3284.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80%

during the forecast period.
