### Report Overview

Granular epoxy molding compound is a kind of thermosetting chemical material used for semiconductor packaging. It is made of epoxy resin as the matrix resin, high-performance phenolic resin as the curing agent, adding fillers such as silicon micropowder, and adding various additives. Its main function is to protect the semiconductor chip from the influence of the external environment (water vapor, temperature, pollution, etc.), and to realize composite functions such as heat conduction, insulation, moisture resistance, pressure resistance, and support. The granular epoxy molding compound adopts the method of evenly dusting powder in the molding process, and becomes liquid after preheating, and the carrier board with the chip is immersed in the resin to form it. Advantages, GMC is expected to develop into the main wafer-level packaging material, and the market development prospect is good.
