Report Overview

A Graphene Air Purifier is an air purification device that utilizes the unique properties of graphene to clean and improve the quality of indoor air. Graphene is a single layer of carbon atoms arranged in a hexagonal lattice, and it has several remarkable characteristics. Graphene-based air purifiers typically use graphene filters or membranes. Graphene filters have a high surface area, allowing them to capture and remove a wide range of airborne pollutants more effectively than traditional filters. They can trap particles such as dust, pollen, pet dander, and even microscopic pollutants like bacteria and viruses. Moreover, graphene has excellent electrical conductivity and thermal properties. This enables graphene air purifiers to use low power consumption and generate minimal heat while effectively filtering the air, making them energy-efficient and safe to use.
