Report Overview

Graphene, an allotrope of carbon, is composed of hexagonal atoms fused together in a recurring design. Due to its extreme thinness, graphene is treated as two-dimensional. The honeycomb structure of graphene gives it multiple exceptional characteristics, such as being a highly strong and light material in the world. It is also a decent conductive and nearly transparent. Graphene has a number of potential applications in different industries. Graphene is oxidized to form graphene oxide, which is easy to process since it is soluble in water. Graphene oxide is not a good conductor of heat and electricity, but can be processed to enhance its properties. It is commonly available in powder or dispersed form, as well as a coating on substrates. Graphene oxide readily mixes in water, which has led to its use in water-based paints & inks, thin films, and biomedical applications.

The global Graphene Oxide Deion Water Solution market size was estimated at USD 285.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.75% during the forecast period.
