Abstracts

Graphene oxide dispersion refers to a colloidal suspension of graphene oxide (GO) sheets in a liquid medium, typically water or organic solvents, engineered for ease of handling, processing, and integration into various applications. This material leverages the unique properties of graphene oxide?such as high surface area, mechanical strength, electrical insulation (when not reduced), and functional oxygen-containing groups?while overcoming challenges related to the aggregation and poor solubility of pristine graphene. The dispersion form enables uniform coating, mixing, or functionalization, making it a foundational material in fields like composites, energy storage, sensors, biomedical devices, and filtration membranes.

The global Graphene Oxide Dispersion market size was estimated at USD 215.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.75% during the forecast period.
