A GPU, on the other hand, is designed for parallel processing, handling thousands of smaller tasks at once. This makes GPUs much better suited to workloads like rendering 3D graphics, powering user interfaces, video processing, and accelerating artificial intelligence (AI) tasks such as machine learning and computer vision. GPU IP refers to licensed graphics processing technology that chip manufacturers integrate into their own silicon designs. Today, the GPU IP market is witnessing robust demand across consumer electronics, smartphones, automotive infotainment, smart TVs, edge AI, and industrial HMI devices. The widespread transition to integrated SoC architectures?especially in automotive and AI edge computing?is fueling the adoption of customizable GPU IP cores. Furthermore, as OEMs and chipmakers seek more control over their silicon roadmaps, interest in differentiated in-house graphics IP or semi-custom solutions is growing. Future trends in the GPU IP space include hardware-based ray tracing support, AI-native GPU designs, ultra-low-power implementations for wearables, and domain-specific GPU compute for edge AI workloads. GPU IP is classified broadly into 2D, 3D, compute, AI-accelerated, and safety-rated variants, each catering to different integration scenarios. Automotive and industrial edge applications dominate GPU IP demand, with mobile and desktop rounding out the remainder. Imagination Technologies is a dominant player in GPU IP, especially in mobile and automotive segments, with comprehensive product lines ranging from A-Series to E-Series and cloud/desktop?capable DXTP. Its strengths lie in power?efficient design, hybrid AI/graphics capability, and scalable virtualization support?positioning it well for emerging AIoT, automotive, and high?performance embedded markets.

The global Graphics Processor IP market size was estimated at USD 185.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
